New Tramsread Vogelsang 12m BackPac

Tramsread has collaborated with Vogelsang to produce a new 12m BackPac Dribble Bar.

The system combines a Vogelsang 12m Dribble Bar with a Tramsread 1000m Random Wrap reeler. Its design allows the transport of both applicator and hose reeler on a single linkage. The applicator is mounted on a heavy duty three point linkage, and combines a rear mounted male Q-fit A-frame to allow the "backpacking" of the Tramsread reeler.

The Vogelsang 12m dribble bar has a galvanised steel frame and the market leading ExaCut distributor with 48 outlets at 40mm Ø, the scope to handle up to 300cu an hour and the design to cope with foreign bodies, making the Vogelsang range of dribble bars user friendly. Other unique benefits to the range includes stiffer pipe end outlets that can be run on the ground but does not affect the accuracy of placement, all stay

equally at 25cm spacing, keeping crop growth even.

The Tramsread reeler has a detachable spool which is easily removed from the robust carrying frame by removing two securing pins, lowering to the ground and moving away. One frame can serve several spools. The spool is rotated by twin hydraulic motors which allow longer lengths of drag hose to be recovered at any one time. It can comfortably hold up to either 1000m of 4", 1000m of 5", 800m of 6" hose or a mixture of both when using the easily attached partitions.

The new machine was recently displayed for the first time on Tramsread's stand at the LAMMA show and received great acclaim.
